before 16 September](#)

## Invitation to Workshop [online]

We will discuss the creation of a European network for commercial providers of analytical services; what are the benefits of belonging to a network, how can we all gain from closer collaboration and mutual inspiration.

We will identify how we can join efforts to best address the challenges we meet when working as scientific service providers.

The workshop will be highly involving, focusing on co-creation and brainstorming to identify requirements and wishes for a potential future network
